Add to List

Share

You are given two **non-empty** linked lists representing two non-negative integers. The digits are stored in **reverse order**, and each of their nodes contains a single digit. Add the two numbers and return the sum as a linked list.

You may assume the two numbers do not contain any leading zero, except the number 0 itself.

Example 1:

Input: l1 = [2,4,3], l2 = [5,6,4]

Output: [7,0,8]

Explanation: 342 + 465 = 807.

Example 2:

Input: l1 = [0], l2 = [0]

Output: [0]

Example 3:

```

1  /**
2   * D
3   * s
4   *
5   *
6   *
7   val(
8   *
9   List
10  val(
11  * }
12  */
13  clas
14  publ
15
16  addT
17  l1,
18  List
19  Lis
20
21  11->
22  12->
23  =n1+
24  car
25  >nex
  
```
